

■ Product Overview

SearchXS for OpenText Content Server

SEARCHXS

SEARCHXS provides an innovative and intuitive new approach, enhancing ease of access to the wealth of information across your Content Server 'Livelink' environment, delivering search capability and results in a format that meets the specific differing needs of corporate, project and operational business groups - significantly increasing your ROI in Livelink ECM.

This approach drives and delivers access to information for the front-line business users. Transparent advanced search capability providing fast accurate retrieval of information – when they need it – how they need it...and...they no longer need to be technology or search experts [\[Preview Here\]](#).

The screenshot displays the SearchXS interface with three search panels overlaid. The top panel is 'Finance Data Search', the middle is 'Legal Data Search', and the bottom is 'Engineering Data Search'. Each panel includes search criteria fields (e.g., Invoice Date, Document Number, Asset), dropdown menus for operators (And, Or), and checkboxes for result display options (e.g., Finance Doc Type, Document Number). A 'Search' button is visible at the bottom of the Engineering Data Search panel.

Leveraging value from Content Server Search

Increased accuracy and relevance of information retrieved in data sets that reflect how your users think when looking for information on which they base their next decision.

Increased productivity...facilitating the change from a time consuming browsing culture to 'search and find' reducing time spent looking for information, giving you, your group and your organisation the competitive edge, allowing users to focus on using information to make better informed decisions...faster.

Simplicity and Power
